WHAT IS BITCOINMOON?	02
WHY IS BITCOINMOON AN ERC20 TOKEN?	03
THE TRADING AND EXCHANGE	04
ROAD MAP 2018 & 2019	05

# *WHAT IS BITCOINMOON?*

*BitcoinMoon (BTM) is a digital currency. It uses peer-to-peer technology to operate with no central authority or banks; managing transactions are carried out collectively by the network. There is no central control over the token.*

*BitcoinMoon team are looking to implement our currency into many already heavily used ecommerce scripts. And on the user level being able to share money, wire money, or just send a gift to a friend, BitcoinMoon will make this possible!*

# *WHY IS BITCOINMOON AN ERC20 TOKEN?*

*BitcoinMoon is an ERC20 Ethereum token, the fastest & safest token standard based on the Ethereum network.*

*BitcoinMoon token is compatible with any Ethereum wallet, and it can be transferred at any time, and it can also be utilized while handling smart contract on a decentralized application (DAPP). For any ERC-20 supported exchange, BitcoinMoon can be added without any hassle. Due to these features that make of the BitcoinMoon token a cryptocurrency easy to transfer and process, there is a high probability that various online communities would adopt it.*

# THE TRADING AND EXCHANGE

*The Trading and Exchange of BitcoinMoon Token very Simple and Accessible, Especially to other cryptocurrencies and fiat currencies.*

*The plan is to add BitcoinMoon to as many exchanges as we can, to in-turn make trade and exchange easy. Introducing BitcoinMoon to all these exchanges will not only aid the availability of the token; it will also improve the visibility of our currency.*

*To make the token more available, our first goal is to design online, mobile and desktop wallet. With this wallet, users will be able to store BitcoinMoon Token and Ether. The wallet will assure maximum security, and you can have your BitcoinMoon Token anywhere with you safely.*

*This feature will be particularly convenient for transfers that are international. Of course, any cryptocurrency already allows personal and international transfers. Bitcoin allows international transfers and there are millions of them done every day, although there is no way you cannot get anyone's address for you to interact with them without restrictions as we hope to create in our apps, where you will be able to connect and pay others as easily as chatting in a social media app.*

# *ROAD MAP* 2018 & 2019

## Q3 2018

Project idea confirmed and development started  
Development #airdrop script that will increase our twitter following to an estimated 10k followers.  
Launch online Decentralized Open Source Wallet. Having initially built on the Ethereum blockchain.

## Q4 2018

Launch website, whitepaper and marketing materials.  
Pre ICO (Token Sale)

## Q1 2019

Main ICO (Token Sale)  
Virtual Masternode  
Launch Mobile and Desktop Wallet.

## Q2 2019

Main ICO (Token Sale) END  
Alliances with luxury companies to promote the BitcoinMoon  
Addition of 1-2 larger exchanges.  
Our main longer goals would be larger user-adoption and on-going development of our APP.
